- 1 Begin by lightly drawing a small circle- about the size of your thumb.

- 2 On the top left side of the small circle, lightly draw on a small oval. The oval should begin in the circle and point out of the circle at about a 70-80 degree angle.
- 3 Repeat step 2, but mirrored onto the right side such that you end with 2 small ovals pointing out of the circle that are mirror images vertically of one another.
- 4 At the bottom of the small circle, lightly draw on another larger circle about 1.3 times the size of the smaller one.
- 5 Erase the bottom of the first small circle such that it is now only connected to the larger circle by 2 points.
- 6 Erase where the small ovals on either side of the first circle overlap with the first small circle.
- 7 Now that you have one outside line, go over all of the outside line with your pencil while making small curly flourishes- aka continually write w to achieve this.
- 8 In the middle of the original small circle, lightly draw in an isoscles trapezoid (the pizza hut logo shape)- make sure the edges are rounded though and not sharp!
- 9 On the bottom left and bottom right corners of the trapezoid, draw small circles to cover the points.
- 10 Inside the trapezoid, on the middle of the right half, draw and fill in an oval at 180 degrees.

- 11** Inside the trapezoid, on the middle of the left half, draw a small n, elongated on either side. Horizontally, this should line up with the top of the oval you just drew.

- 12** In the very center of the trapezoid vertically slightly under the n and oval, draw a small horizontal line. This should not touch the n nor the oval, and should be almost under both.
