ABSTRACT

The effects of ferrous ion-chelating activity were conducted according to Guo et al. An aliquot of 1 ml extract was added to a solution of 100 μ L of FeCl_3 (2.0 mM), 3.7 ml of distilled water and 200 μ L of ferrozine (5.0 mM). After 20 min, the absorbance was recorded at 562 nm. The inhibition percent and IC_{50} values were calculated.
