Abstract

This is a template protocol for a clinical performance and usability evaluation of one or more malaria rapid diagnostic tests (RDTs). Resources associated with the protocol are also provided. The goal of this template is to assist researchers, manufacturers, and investigators in developing a comprehensive clinical study protocol for studies of this nature and in considering key assumptions and elements of study design, planning, and execution. This work was supported by a grant from the Gates Foundation (INV-071824).
