ABSTRACT

This protocol is a detailed version of the Allen Institute's Patch-Seq Recording and Extraction protocol, which describes the process to obtain electrophysiological recordings and cellular contents from neurons in postnatal mouse and/or human brain slices.

Note: Research reported in this publication was supported by the National Institute Of Mental Health of the National Institutes of Health under Award Number U19MH114830. The content is solely the responsibility of the authors and does not necessarily represent the official views of the National Institutes of Health.
