Abstract

scRNA-seq protocol for ESC DE differentiation time course

scRNA-seq protocol

1 Cells were harvested every 12h during DE differentiation for scRNA-seq experiments with targeted collection ranging from 3000 to 6000 cells.

2 Single-cell 3′ RNA-seq libraries were generated with 10x Genomics Chromium Single Cell 3′ Reagent Kit v.3 following the manufacturer's guidelines using 10X chromium controller firmware v5.0.

3 The libraries were sequenced on NovaSeq 6000 platform following the manufacturer's guidelines.
