Keywords: PCR, Q5, Toehold assembly, iGEM

Abstract

General toehold assemble method using NEB Q5 High-Fidelity 2x Master Mix. Here we took Boir Noir toeholds as an example, it has four candidates we wanted to test. In order to have a higher yield, run 5 reactions for each candidates.

Materials

MATERIALS

 Q5 High-Fidelity 2X Master Mix - 500 rxns **New England Biolabs Catalog #M0492L**

 UltraPure™ DNase/RNase-Free Distilled Water **Thermo Fisher Scientific Catalog #10977015**

 Toehold primer **IDT**

 Commin primer **IDT**

 DNA template

PCR preparation

- 1 Prepare 4 effendorfs label them, each one will contain the master mix of a certain toehold primer.

Attention: Keep the polymerase on ice avoiding denaturation.

(Order of pipetting: H₂O → Q5 MasterMix → primers)

Numb er of reacti ons per Mast er mix:	5					
React ion Volu me:	25					
	Refer ence (25 uL)	Mast er mix1	Mast er mix2	Mast er mix3	Mast er mix4	
DNA templ ate(~ 60ng/ uL)	1					
Com mon prime r (10μ M)	1.25	6.25	6.25	6.25	6.25	
Toeh old_p rimer _1(10μ M)	1.25	6.25				
Toeh old_p rimer _2(10 μM)			6.25			
Toeh old_p rimer _3(10 μM)				6.25		

Toehold primer_4 (10 μM)						6.25
Q5 MasterMix	12.5	62.5	62.5	62.5	62.5	62.5
H2O (DNAse RNAs e free distill)	9	45	45	45	45	45
Total	25	120	120	120	120	120

- 2 Pipette up and down mix the master mix thoroughly.
- 3 Take 20 PCR tubes label them, pipette 24 μl of the master mix into the tubes accordingly.
- 4 Add 1 μl of DNA template into each PCR tubes

PCR

- 5 PCR machine setting: Calculate the reaction temperature according to the primer sequence using NEB online Tm calculator: <http://tmcalculator.neb.com/#!/main>

Template	Fw Primer	Rev Primer	Length	Elongation time	Tm - Q5	Tm used
DNA template	Toehold primer	Common primer	900-1000	30s	T1/T2	T = Average (T1, T2)

- 6 Thermo cycle setting:

	Initial Denaturation	98°C	30 seconds
		98°C	5–10 seconds
	25–35 Cycles	T°C	10–30 seconds
		72°C	20–30 seconds/kb
	Final Extension	72°C	2 minutes
	Hold	4°C
